

One labelled frame takes a new camera from 0.36-0.51 to about 0.98

Solid: source camera plus k target frames, band across five seeds. Dashed: the same k frames ALONE. Where they meet, transfer has stopped mattering. An optimistic bound on onboarding a new venue - a second camera on one pitch is an easier target - and the target set is 12 distinct scenes, which is why small budgets go so far here.
